Along with the increasing requirements for hard copies with higher quality, there is a demand for fine pitch recording in recording media. As an optical recording medium for recording such fine pitch recording, there are known, e.g., a DVD-R/RW (which is a rewritable DVD) which is used for recording data only once and which has a phase-change recording layer, and a DVD-RAM/DL (which is a dual-layer DVD) which is used for recording data two or more times and which has two phase-change recording layers. The phase-change recording layer is formed by laminating a recording layer which contains a phase-change material with a protective layer. More specifically, the phase-change material is composed of a mixture of a compound such as tellurium (Te), a compound such as chalcogen (S, Se, Te) and a compound such as antimony (Sb). The protective layer is made of a dye or a reflective layer. For the sake of easy understanding, the phase-change material and the protective

Perhotelan What I want to know is: The
item name does not match the Rpp- Sila
bus-Housekeeping-Berkarakter-
Smk-24-BEST is it possible to know the
code in the itemName or the location?
Does anyone know why the item name
begins by Rpp-? A: See this article: Rpp-
means it's a code of RPP- or RPP-SN,
which means that there's a lot of code in

the beginning of the name. In this case
the codes are: RPP: RPP-Silabus-House
