In general, the WLAN module of the mobile terminal can be one of the WLAN modules that support IEEE 802.11a/b/g wireless communications standards and compatible with the 802.11a/b/g wireless communications standard, wherein the wireless communications standard refers to the standard in the industry alliance for telecommunications technology (IEEE 802.11b/g/n) standard. The WLAN module includes an antenna, a power supply circuit, a digital circuit, a wireless local area network (WLAN) controller, a power amplifier, a RF (radio frequency) circuit, and a system controller. In addition, the WLAN module has the functions of receiving external signals and communicating with other WLAN modules. Generally, the wireless communications standard has been improved in recent years. For example, the IEEE 802.11n wireless 82157476af
